

GREEN LIFE GROUP

Natural ecological cleaning products

We change the concept, We take care of the planet.

Green Life Group is Israeli company, world-wide leader, in innovative development of ecological, biodegradable, based on natural components.

GREEN UP cleaning and sanitizing products replaces traditional polluting and poisonous chemicals, eliminating air, water, food and soil pollution.

GREEN UP has patents and registered trademarks needed to export and operate internationally. All products are manufactured under ISO 9001-14001 quality standards.

Products are marketed and distributed in: Israel, Ukraine ,Mexico, Turkey, And in other countries in the registration process as Russia, The Netherlands, and the USA.

Green Up In Cattel

Green Up Products for the Cowshed care

- **Green Up Cow** -Cowshed Cleaning
- **Green Up Milk** - Dairy Milk Equipment Cleaning
- **Green Up Hoof** - Hoof care
- **Green Up Udder** - Teat care
- **Green Up Vacuum** - Milking System Cleaning

Green up Cow - cleaning and disinfection

Systematic cleaning of the cowshed has a big impact on the cows and calves health. Use of **Green Up Cow for cleaning and disinfection** will significantly increase hygiene and reduce the disease contamination among the cows and calves.

Green Up Milk Dairy Equipment Cleaning

Cleaning and disinfecting milk tanks and equipment on a regular basis guarantees milk quality. **Green Up Milk Equipment** do not damage rubber, plastic, metal or stainless steel surfaces. The product protect the milking equipment and is't dangerous to the users or harm the environment.

Green Up Udder

Mastitis infection is well known in dairy cows. The main reason for this infection are bacteria's found naturally in dirt and fecal matter present in the barns penetrating the Udder immediately after milking. Using **Green Up Udder** eliminate infection and reduces mastitis.

Green Up Hoof Cleaner

Cows are hoofed animals. Their hooves are covered with a layer of horn which is constantly growing. Since cows are housed in barns in which bacteria and fungi are present their hooves become infected. The hoof infection is painful causing lameness and adversely affecting milk production. Constant attention must be given to lessen or prevent several different serious infections to the hooves. Using **Green Up Hoof Cleaner** eliminate infection and reduces inflammation of the legs of cattle.

Calves' Care

Green up Cow - cleaning and disinfection

Growth of calves in the barn requires a high level of cleanliness and disinfection in their growth area to prevent contamination and infection of various diseases.

Use of **Green Up Cow** Antibacterial products as will significantly reduce the danger of this happening.

Cleaning the Milking Process

Green Up Vacuum

The level of infection in the milking process is very high. Therefore antibacterial sanitizing of this operation is critical. Use of **Green Up Vacuum** Antibacterial products provides the answer to this problem.

Green Up Vacuum system cleaner eliminate infections. These products do not damage rubber, plastic, metal or stainless steel surfaces. They protect the milking equipment and aren't dangerous to the user, the cows or the environment.

Green Up Products In Cowshed

Benefits

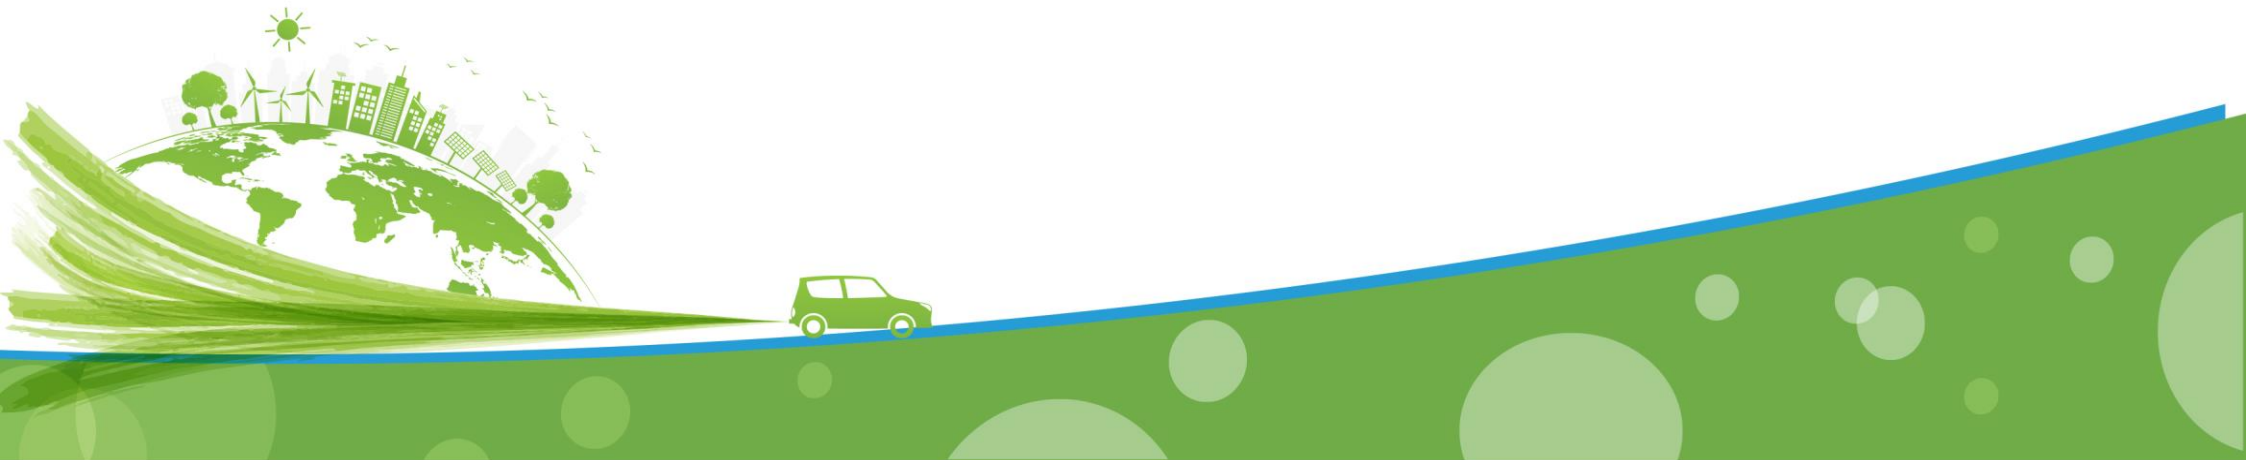

- Environments free of viruses, bacteria and sanitized by means of an antiviral/ antibacterial misting process, which is carried out in a minimum time and with high effectiveness.
- Elimination of bacteria and pollutants.
- Elimination of dirt particles or residues, whether organic or inorganic.
- Using the antibacterial misting contributes to the appropriate operation of the facilities and of the activities carried out in those.
Cost and time optimization. Timely detection and elimination of potential pollutants.
By replacing the use of chemical agents by our ecological products, it is substantially reduced the risk of health problems.
It improves widely the level of prevention by offering an environment free of viruses and bacteria.

Advantage

- Optimization of costs and times.
- Timely detection and removal of potential contaminants.
- By substituting the use of chemical agents for our ecological products is reduced drastically the risk of harm to health.
- Widely improves the level of prevention by offering a virus-free environment and bacteria.
